

## **Real World Learning Objects**

### **Intellectual Property Statement**

One of the goals of the Savvy Cyber Professor program is to create, maintain, and promote a shareable online library of internet-based Real World Learning Objects (RWLOs) that community college faculty can easily access, use, and adapt for their own classes. Faculty can search through the library to find suitable learning objects and assemble them into a customized set of instructional materials to create or improve their courses.

Participation in the Savvy Cyber Professor program commits faculty to the development of one RWLO that is added to the library upon completion of a peer review and approval process. The RWLO developer retains the ownership of the RWLO, subject to the policies of the institution at which the developer is employed. However, the intent of the program is for participating faculty to access and adapt, according to their own learning objectives and classroom environment, RWLOs created by other educators. Each RWLO in the library will list the developer's name and institution. Whether RWLOs are used in their original format or modified by users, credit must be given to the original developer.
